Notice of Allowability	10/733,829	TERSTAPPEN ET AL.
	Examiner	Art Unit
	David A Reifsnyder	1723
The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.		
1. This communication is responsive to communication filed on December 10, 2003.		
2. ⊠ The allowed cl <del>aim(s)</del> is/are <u>1</u> .		
3. The drawings filed on are accepted by the Examiner.		
4.

Application/Control Number: 10/733,829

Art Unit: 1723

## **EXAMINERS COMMENT**

## Drawings

The drawings filed on December 10, 2003 are objected to for being clearly informal. In response to this office action, **Formal Drawings are Required**.

## **REASONS FOR ALLOWANCE**

The main reason for the allowance of claim 1 is the instantly claimed apparatus for observing magnetically responsive microscopic entities suspended in a fluid member, comprising:

- a. a vessel having a transparent wall and a chamber formed therein for containing the fluid medium;
- b. a ferromagnetic capture structure supported on the interior surface of the transparent wall;
- c. magnetic means for inducing an internal magnetic gradient in the vicinity of the ferromagnetic capture structure, whereby the magnetically responsive entities re immobilized along the wall adjacent to the capture structure; and
- d. electrical conductor means supported on the transparent wall for enabling electrical manipulation of the immobilized entities.

Application/Control Number: 10/733,829

Art Unit: 1723

The closest prior art of record (i.e. Liberti et al. (6,013,532) and Liberti et al. (5,200,084) ) both disclose apparatuses for observing magnetically responsive microscopic entities suspended in a fluid member, comprising:

- a. a vessel having a transparent wall and a chamber formed therein for containing the fluid medium;
- b. a ferromagnetic capture structure supported on the interior surface of the transparent wall; and
- c. magnetic means for inducing an internal magnetic gradient in the vicinity of the ferromagnetic capture structure, whereby the magnetically responsive entities are immobilized along the wall adjacent to the capture structure.

The closest prior art of record (i.e. Liberti et al. (6,013,532) and Liberti et al. (5,200,084) ) both fail to disclose or fairly suggest the instantly claimed:

d. electrical conductor means supported on the transparent wall for enabling electrical manipulation of the immobilized entities.

## Conclusion .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
